

Our Enterprise

Based upon long-standing experience in the field of steel and stainless steel as well as processing both of them, we were able to strengthen our enterprise with special know-how concerning man riding hoists and hoisting devices.

Numerous projects concerning international sourcing enable us to fall back on a broad basis of partners.

Consequently, we offer customized engineering with excellent references and develop custom-tailored solutions in joint action with our qualified vendors using their cost potentials.

Wire rope traction hoists for man riding as well as material handling and its corresponding equipment like electrical control boxes, various safety locks and steel wire ropes are the core competence of our enterprise.

Based on our core competence supply availability from our stock and competitive pricing we achieved sustained success and convinced many customers of the advantage to work with dual lift.

To increase the customer's satisfaction further we are working to extend our range with technically advanced products, but at still very reasonable conditions.

Your Benefit

- >> *Quality*
because of our German engineering
- >> *Reliability*
because of our 100% quality-control
- >> *Short delivery time*
because of our company size
- >> *After-Sales Service*
carried out by our competent team
- >> *Price Leadership*
because of our experienced network

Characteristics of dual lift® traction hoists P508 CE to P1010 CE

- >> *robust aluminium casing*
- >> *gear parts and sheave made of hardened steel*
- >> *factor of safety against break or failure >4*
- >> *large traction reserve*
(the demands of EN 1808 are clearly exceeded)
- >> *mechanical overload limiting device*
- >> *upper limit switch as option*
- >> *control box available either for a single hoist or alternatively for two hoists*
- >> *fastening of the hoist either with a central 16 mm load pin or with two screws (M10)*

Before being delivered each hoist is tested individually to ensure it is working under overload and thus running through a hundred percent quality control.

Our Vision and Mission

Vision – our goal

We are one of the biggest suppliers of wire rope traction hoists in Germany and Europe. Because of our competitive position we offer highest customer benefit concerning quality, reliability, deliverability, after-sales service and price.

Mission – our road to success

Along with optimum quality and reliability our customers get very good cost effectiveness. We live quality by means of good service and high customer focus and thus bring about satisfied re-purchasers. By targeted innovations and through our market position we use manifold possibilities to optimize our costs and pass this advantage on to our clients. At the same time all our products are available at short notice since we want to satisfy our clients as much as possible.

Our Customers

- >> *Construction elevators*
- >> *Rental companies*
- >> *Driven scaffolds*
- >> *Height assemblies*
- >> *Industrial climbing*
- >> *Façade and roof maintenance*
- >> *Assembly and service of wind turbines*
- >> *Shipbuilding*
- >> *Building of chimneys*
- >> *Elevator building*

Our Products

Our engineering in Germany develops individual solutions and co-operates with qualified suppliers who meet our high standards. Quality-audits at the manufacturer and quality-tests of all traction hoists are carried out by our team which gives optimized reliability and dependability of our technologies to you. All our products are in possession of an official CE-certification and are based on experiences of our partners in the traction hoist business.

- » **Hoist dual lift® P508 CE**
- » **Height: 599 mm**
- » **Length: 301 mm**
- » **Width: 261 mm**
- » **Weight: 53 kg**
- » **Capacity: 600 kg**

The traction hoists dual lift P508 CE or rather P809 CE and also the new P1010 CE combine reliability and maintainability with excellent cost effectiveness. With capacities of 600kg, 800kg and 1000kg they do exactly meet the market's demand. Our wire rope traction hoists are the ideal drive system for suspended working platforms and height-adjustable work locations. Since the rope does not have to be stored this allows a principally unlimited lifting height. Man riding hoists of the series P508 CE to P1010 CE are approved for man riding and meet the standard EN 1808 "safety requirements on suspended access equipment". Each hoist type has been approved within the scope of a CE-type approval and will be delivered complete and with the corresponding CE-integration certificate.
